

Abdrahman Walied Nasr

Software Engineer | Backend & DevOps

Portfolio · LinkedIn · GitHub · +20 114 863 0739 · abdrahmanwalied11@gmail.com · Alexandria, Egypt

SUMMARY

Backend Software Engineer with practical experience in REST API design, JWT authentication systems, and containerized deployments. Builds full-stack applications using Node.js and React, ships via Docker and Nginx, and automates workflows with GitHub Actions. Focused on secure, maintainable architecture and reliable production delivery.

TECHNICAL SKILLS

Backend: Node.js, Express.js, Flask, REST API Design

DevOps: Docker, Docker Compose, Nginx, GitHub Actions (CI/CD), Railway, Render, Netlify, Vercel

Frontend: React, TypeScript, JavaScript (ES6+), Zustand, Zod, Framer Motion

Databases: MongoDB, PostgreSQL, SQLite, Firebase

Security: JWT (access/refresh tokens), bcrypt, Rate Limiting, RBAC, httpOnly Cookies

AI/ML: Python, Pandas, NumPy, Hugging Face, YOLOv8, OpenRouter API

Core: System Design, MVC Architecture, OOP, Data Structures, RESTful API Design

PROJECTS

DevOS — Personal Developer Dashboard | *React · TypeScript · Vite · Zustand · Zod · IndexedDB · Docker* [GitHub ↗](#)

- Architected a local-first developer dashboard integrating 9 external APIs (GitHub, Vercel, Railway, Supabase, etc.) with all credentials stored exclusively in IndexedDB zero backend, zero telemetry.
- Designed a modular widget system with collapsible state, per-widget visibility toggles, and skeleton loading persisted to localStorage without a state management server.
- Containerized with Docker + Nginx multi-stage build; production chunks split by route via Vite; includes a health-check script auditing TypeScript errors, dead imports, and build size.

Track Your Journey — Job Application Tracker | *React · TypeScript · Vite · Framer Motion · IndexedDB · Docker* [GitHub ↗](#)

- Built an offline-first SPA with full CRUD, a 5-stage status pipeline, and base64-encoded JSON import/export no backend required, all persistence handled via idb wrapper over IndexedDB.
- Implemented a Canvas particle system reading CSS variables at runtime and animated stat dashboard using Framer Motion with staggered entry and AnimatePresence transitions.
- Deployed as a static SPA on Netlify; containerized with Docker + Nginx multi-stage build for self-hosted option.

Smart Auth System | *Node.js · Express 5 · MongoDB · JWT · Zod · bcrypt* [GitHub ↗](#)

- Designed a dual-token auth flow: 15-min access tokens + 7-day refresh tokens, both stored in httpOnly cookies eliminating XSS token exposure; refresh tokens tracked in MongoDB with isRevoked flag for true server-side revocation.
- Implemented three-tier rate limiting (global, per login/register/refresh), TTL indexes for auto-expiry of refresh tokens, and centralized error handling covering Zod, JWT, and mongoose errors in a single middleware.

AI Movie Recommendation App | *React · Node.js/Express · TMDB API · Qwen3 (OpenRouter)* [GitHub ↗](#)

- Full-stack recommendation system combining TMDB catalog data with Qwen3 LLM via OpenRouter for contextual movie suggestions; handled streaming response parsing and multi-environment configuration.
- Frontend on Netlify, backend on Railway, separate deployment pipelines with environment variable isolation.

EDUCATION

Borg El Arab Technological University · B.Sc. Industrial & Energy Technology (IT Track) · Aug 2024 – Aug 2028

GPA: 3.4 · Courses: Web Dev, Databases, IoT, CCNA, Data Structures, Java Programming

LANGUAGES

Arabic: Native **English:** Upper-Intermediate (B2)
